## SABINA BARBHUIYA

**FULL STACK WEB DEVELOPER**

## ABOUT ME

I am extremely motivated and a fast learner with attention to details. Two years back I wrote my first "Hello World" python script. And since then I was hooked to programming. Every day I find myself driven by the excitement of learning a new algorithm to solve a problem or designing a new UI style to enhance user experience.

## SKILLS

- ✓ JavaScript
- ✓ Node.js
- ✓ React
- ✓ HTML5
- ✓ CSS3
- ✓ Python
- ✓ TDD
- ✓ REST
- ✓ Git

# EXPERIENCE

**Open Source Contributions**

**Mozilla Treeherder**

It is a reporting dashboard for Mozilla check-ins. I fixed bugs and helped convert repetitive UI controls into React components.

**AutoComplete.js**

It is a pure vanilla JavaScript library that's designed for speed, high-versatility and seamless integration with a wide range of projects and systems. I worked on improving user experience by auto-selecting the first item after every search.

# PROJECTS

**Cake Supermarket** *"A social platform for bakers around the world"*

I have built this project to showcase the various full-stack technologies that I have learnt so far. Users can sign up to create profiles for their bakery, view other bakeries and also leave comments. I used Google Maps API to show the bakery location

**Cows And Bulls Game** *"Online version of the famous and age old code-breaking game"*

In the game, players have to guess the correct number based on position hints. I used pure jQuery/JavaScript to write the rules of the game.

**Yazali** *"A simple and fast way to search for favorite movie trailers"*

It shows different movie trailers using a movie DB API.

**Space Age** *"A simple React App"*

It tells your age and weight in different planets.

**Rent-a-Vintage** *"A landing page for a vintage cars rent company"*

Showcases various CSS styles and animations.
